A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)⊠	Responsive to communication(s) filed on 28 Oc	<u>ctober 2005</u> .				
	This action is <b>FINAL</b> . 2b)⊠ This action is non-final.					
3)□	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
	closed in accordance with the practice under E	x parte Quayle, 1935 C.D. 11, 4	53 O.G. 213.			
Dispositi	on of Claims					
4) ⊠ Claim(s) 1-10 is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.  5) □ Claim(s) is/are allowed.  6) ⊠ Claim(s) 1-10 is/are rejected.  7) □ Claim(s) is/are objected to.  8) □ Claim(s) are subject to restriction and/or election requirement.

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Treves et al (Environ. Sci. Technol., 2000), Droux et al (WO 98/25918) and Kirk-Othmer: Encyclopedia of Chemical Techology, vol. 10, 1993, all in combination.

The instant claims are drawn to a process for the separation of 1,4-butanediol mononitrate from a solution of 1,4-butanediol dinitrate and 1,4-butanediol, by extracting the mononitrate with water, and then extracting the mononitrate with a water-immiscible solvent.

Treves et al teach the preparation of 1,4-butanediol mononitrate (4-nitrooxy-1-butanol) by nitrating 1,4-butanediol followed by isolation by flash chromatography on silica gel (p 1198, method 1). While silent on the dinitrate, it would have been apparent them some of the butanediol would have been nitrated such that at least small amounts of the dinitrate was produced in addition to the mononitrate.

The major difference between Treves et al and the instant claims is that Treves does not teach the claimed extraction to isolate 1,4-butanediol mononitrate.

Droux et al, however, teach that nitroxyalcohols are produced by nitrating the corresponding diol with nitric acid, in chloroform or trichloromethane, and then

Application/Control Number: 10/534,867

Art Unit: 1621

separating the nitroxyalcohol by first extracting with water, and then with an organic chlorinated solvent, in two consecutive extraction columns (prep. 1, 3, and 4).

The Encyclopedia of Chemical Technology teaches that for liquid-liquid extractions, such as that which taught by Droux et al, it is useful for multistage contacting (extractions) to be arranged in counter-current manner, especially for commercial-scale operations, for balance between high extract concentration and high degree of extraction of the solute (p 137).

In view of the combined reference teachings, it would have been obvious to a person having ordinary skill in the art to substitute the use of flash chromatography to separated the butanediol mononitrate, as taught by Treves, with a counter-current liquid-liquid extraction as suggested by Droux et al and The Encyclopedia. The butanediol monohydrate is an important intermediate in producing esters having pharmacological utility. Therefore, a person having ordinary skill in the art would have found it obvious to combine the above prior art in the manner suggested with desire to, and reasonable expectation of success in finding a technique for isolating the butanediol monohydrate that would afford the purest possible product.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sikarl A. Witherspoon whose telephone number is 571-272-0649. The examiner can normally be reached on M-F 8:30-6:30.

Application/Control Number: 10/534,867 Page 4

Art Unit: 1621

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler can be reached on 571-272-0871. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
